Academic Year: 2026-2027	Mapping of Project Titles with POs (Program Outcomes) and PSOs (Program Specific Outcomes)	Revision : 00 Dated : 1/7/2026
Term – I	Department: Information Technology	Date of Preparation : 21/04/2026

Project Title – An Intelligent NLP System for Legal and Employment Document Risk Analysis with Multiplatform Delivery

Brief Description – The proposed project develops an AI-powered platform to analyse legal and employment documents using Natural Language Processing (NLP) and Large Language Models (LLMs). It identifies risky clauses, highlights Red and Green Flags, and generates simple summaries for better understanding. The system calculates trust and risk scores while providing intelligent recommendations to users. It is delivered through a responsive web application and a browser extension for real-time document analysis.

An Intelligent NLP System for Legal and Employment Document Risk Analysis with Multiplatform Delivery	3	3	3	2	3	2	1	2	2	2	2	3	3	3

Justification :

The increasing complexity of legal and employment documents makes it difficult for users to understand important terms and hidden risks. This project leverages Artificial Intelligence, Natural Language Processing (NLP), and Large Language Models (LLMs) to simplify document analysis and identify risky clauses. It generates easy-to-understand summaries, trust scores, and risk assessments to support informed decision-making. The system improves transparency, saves time, and enhances user awareness before accepting legal agreements. Its web application and browser extension provide a practical and accessible solution for real-time legal document analysis.
