Project Title: An Intelligent NLP System for Legal and Employment Document Risk Analysis with Multiplatform Delivery

Project Group ID and Members: 4

Mr. Sushant More  
Mr. Varun Pawar  
Miss. Pratiksha Rahane  
Miss. Payal Shinde

Project Guide: Mr. D. R. Cholke

**Functional Requirements:**

- The system shall allow users to upload legal and employment documents in **PDF, DOCX, and TXT** formats.
- The system shall analyse **Terms of Service, Privacy Policies, Employment Agreements, NDAs, and other legal documents**.
- The system shall extract text from uploaded documents and website URLs.
- The system shall preprocess the extracted text using NLP techniques.
- The system shall identify important legal clauses using Large Language Models (LLMs).
- The system shall classify clauses into **Red Flags** (high-risk) and **Green Flags** (safe).
- The system shall generate simplified summaries in easy-to-understand language.
- The system shall calculate **Risk Score** and **Trust Score** for each document.
- The system shall provide intelligent recommendations based on identified risks.
- The system shall maintain users' document analysis history.
- The system shall generate downloadable analysis reports.
- The system shall provide real-time analysis through application and browser extension.

## NonFunctional Requirements:

### **1.Performance**

The system should analyse a standard document within **10–20 seconds**.

### **2.Accuracy**

The NLP model should provide high accuracy in clause identification and risk classification.

### **3.Security**

Uploaded documents must be securely stored and transmitted using encryption.

User authentication and authorization should be implemented.

### **4.Reliability**

The system should provide consistent analysis with minimal downtime.

### **5.Scalability**

The platform should support multiple concurrent users and large document uploads.

### **6.Usability**

The interface should be simple, responsive, and user-friendly.

### **7.Compatibility**

The application should work on major web browsers (Chrome, Edge, Firefox) and different operating systems.

### **8.Maintainability**

The software should have a modular architecture for easy updates and feature enhancements.

### **9.Availability**

The system should be available **24×7** with regular backup mechanisms.

### **10.Portability**

The application should be deployable on cloud platforms and accessible from desktop and mobile devices.
